

TQ VALVES

What's new?

As you probably know, TQ valves are phased out for a couple of years now.

Before the phased-out, we proceeded to a last buy to cover spare part needs, but the stock is now over.

Retrofit kits

A new replacement solution has been developed with pulse valves. This solution only works with 30HX units not with 30GX (for which we unfortunately have no solution)

For each unit size / option, a special kit has been created. Each kit includes:

- Pulse valves, cables and coils
- Copper pipings
- Insulation
- Fittings

Current unit software is compliant with this modification (no upgrade needed). But you must set the parameter "ECON-SEL" in the unit configuration. The value goes from 1 to 2. (Factory or service table)
